REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the closest prior art, to Keller (US 2001/0022995) and Lauterbach (US 3900639) suggests, in combination, forming a thermally sprayed film on an inner face of a bore of a cylinder block by a method including generating a spiraling vapor current, spraying molten metal particles from a thermal spraying gun inserted into the bore towards the inner face of the bore with the spiraling vapor current, and forming the thermally sprayed film on the inner face with the sprayed molten particles (as discussed in paragraph 7 of the October 21, 2005 Office Action). However, these references, alone or in combination, do not teach or suggest the requirement now in independent claim 5 that the spiraling vapor current is generated "by sucking air from a pair of suction passages that communicate with an interior of the bore, axes of the suction passages being offset from the axis of the bore in opposite directions."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
